Learn Vue.js Course
Learning Java Applications
Learning End-to-End Testing with Jest
React: Testing and Debugging

Remy Ninganza

Software Development Engineer | AWS Certified | Expertise in JavaScript, React, Java & Spring Boot | Front-End & Backend Solutions

Phoenix, Arizona, United States

Summary

Innovative Software Development Engineer with over 3 years of experience in full-stack development and cloud-based solutions. I specialize in building scalable, cloud-optimized applications using Java, JavaScript, React, and Spring Boot.

Key Technologies:

- Front-end: React.js, JavaScript (ES6+), HTML5, CSS3, Sass
- Back-end: Java, Spring Boot, Node.js, Express.js, REST APIs
- Database: PostgreSQL, MSSQL, JPA/Hibernate
- Cloud & DevOps: AWS (EC2, S3, ECS, ECR, CloudWatch), Docker, Jenkins, CI/CD
- Payment Integration: Stripe, PayPal
- Email Services: AWS SES
- Cloud Storage: AWS S3
- Authentication: JWT, Spring Security
- Database Design: PostgreSQL schema modeling
- Testing: JUnit, Jest, Cypress
- Version Control: Git, GitHub

Achievements:

- Implemented a microservices architecture using Spring Boot, improving system modularity and scalability, making it easier to develop and maintain features.
- Developed a responsive React-based frontend with Redux, reducing load times by 20% and delivering a seamless cross-device user experience.
- Optimized PostgreSQL schema for efficient management of payments, services, and user data, improving data handling efficiency by 25%.
- Integrated Stripe payment gateway with real-time webhooks, improving payment processing efficiency by 30%.

- Implemented secure JWT-based authentication with Spring Security, enhancing platform security.
- Set up CI/CD pipelines using Jenkins and Docker, reducing deployment time by 40% and accelerating production cycles.
- Deployed scalable cloud services using AWS (EC2, S3, ECS, ECR, CloudFront, SES), ensuring 99.9% uptime.
- Streamlined media management with AWS S3, improving image load times by 15%.
- Leveraged AWS SES for automated email notifications, boosting user engagement with important alerts and reminders.
- Developed custom React hooks to enhance state management, reducing redundant code by 10%.

I'm committed to crafting clean, maintainable code and continuously advancing my knowledge of the latest technologies.

Let's connect and explore how we can drive innovation together!

Experience

Arizona State University

Full Stack Developer

January 2022 - Present (2 years 10 months)

Tempe, Arizona, United States

At Arizona State University, I've been enhancing the user experience through responsive, accessible web development and full-stack development.

I leverage modern technologies to optimize system performance and streamline processes.

Key Contributions:

- UI/UX Enhancement: Developing intuitive, responsive UI components using React.js, JavaScript (ES6+), HTML5, CSS3, and Sass, driving improved user engagement.
- Performance Optimization: Restructuring legacy code and implementing efficient front-end patterns, leading to streamlined performance and reduced load times.

- Scalable Web Applications: Building robust, scalable web applications using Java, and Vue/React, ensuring high performance across platforms.
- Server-Side Optimization: Optimizing backend functionality to reduce processing times, significantly enhancing the performance of search engine and key applications.
- Cross-Functional Collaboration: Collaborating with project managers, designers, and engineers in agile sprints to drive continuous improvements and maintain high code quality.
- Data-Driven Insights: Integrating Google Analytics across web applications to capture real-time data, supporting data-driven decision-making.
- Cloud Solutions & Cost Efficiency: Collaborating on backend optimizations and API integrations using AWS services (S3, Lambda) to improve scalability and reduce infrastructure costs.

I focus on delivering seamless, high-performance digital experiences by combining innovative solutions with industry best practices.

Uber

Quality Assurance Engineer

January 2021 - January 2022 (1 year 1 month)

Phoenix, Arizona, United States

At Uber, I played a key role in ensuring the seamless integration of various platforms and maintaining high service standards across support systems.

Key Contributions:

- Tested and validated integrations between ServiceNow, Salesforce, and Zendesk, optimizing system efficiency and interoperability.
- Conducted audits of support tickets to ensure strict compliance with internal guidelines, upholding quality and service standards.
- Collaborated with engineering teams by identifying and documenting system integration issues, providing detailed insights for timely resolution.

In this role, I consistently drove improvements in system reliability, ensuring smooth operations across multiple platforms while contributing to Uber's commitment to service excellence.

Apex Systems

Data Analyst

January 2020 - January 2021 (1 year 1 month)

Remote

As a Data Analyst at Apple via Apex Systems, I contributed to improving the accuracy and engagement of Maps services by working closely with cross-functional teams.

Key Contributions:

- Collaborated with cross-functional teams, resulting in a 20% improvement in the accuracy of Apple Maps services.
- Facilitated a feedback loop between Engineering and Product teams, boosting platform engagement by 10%.
- Ensured a 98% consistency rate in data annotations by reviewing and providing detailed feedback to peer contributors.

In this role, I helped optimize data quality and fostered collaboration to enhance Apple Maps' performance and user engagement.

Education

The City University of New York

Certificate, Computer Software Engineering · (May 2019 - June 2020)

Light University of Bujumbura

Bachelor of Science - BS, Computer Science
