Hackathon 2025: **#1 First Round** | Experience: **5+ Years**

LANGUAGES

Java 21 · Python · TypeScript · JavaScript (ES6+)

BACKEND & TESTING

Spring Boot 3.2 · Node.js · Kafka · Resilience4j · JUnit · Cucumber / Gherkin · REST · gRPC · Maven · Gradle · Tomcat

CLOUD & INFRA

AWS (S3, Lambda, EC2, ECR, ECS, SES, CloudWatch) · Kubernetes · Docker · Splunk

DATA & FRONTEND

PostgreSQL · MSSQL · Cassandra · Vector DBs
React · Vue.js · Tailwind · Vite · Sass

TOOLING

Git · GitHub Actions · Jenkins · Jira (Scrum / Kanban) · ServiceNow · Postman

AI & AGENTIC

GPT-4o | **Claude API** | **RAG** | **Vector DBs** | **Vapi** | **Tool-calling agents** | **FastAPI** | **Prompt Engineering** | **Structured outputs**

AGENTIC PATTERNS

MCP servers | **FastMCP** | **Multi-agent** | **Supervisor / critic** | **Guardrails** | **HITL gating** | **Agent evals** | **LangGraph**

CERTIFICATIONS

- AWS Certified Developer
- Java Memory Management
- React: Testing & Debugging
- E2E Testing with Jest

EDUCATION

Light University of Bujumbura
B.S., Computer Science

City University of New York
Certificate, Software Engineering

SUMMARY

Software Engineer at American Express owning the full lifecycle of high-reliability distributed systems: design, build, automated testing, deployment, production support. Built the zero-code validation engine **now adopted across multiple teams**, won the Amex Hackathon (#1, first round), and run a deployed production system on my own time.

> Quality is my signature: the validation engine **raised the repository's regression-quality bar**, and my own production system ships through a **test-gated release pipeline** with smoke checks.

EXPERIENCE

American Express
Phoenix, AZ
Software Engineer, Backend Services & APIs
Dec 2024 – Present

- **Comparison Engine, zero-code journey validation:** Built a Spring Boot engine (Java 21, Cucumber 7, Resilience4j) that eliminated writing any Java test code per journey. Engineers write Gherkin + CSV; the engine handles DB seeding, HTTP triggers, Kafka polling, multi-table/field comparison, DLQ correlation, and reporting. New modes = one `@Component`, zero changes to the runner. **Adopted across multiple teams, accelerating test automation 80%+.**
- **Requirement vs. Code Validation Engine:** Pulls the full requirement, compares against live implementation, flags every gap and discrepancy. Bug turnaround down **50%+**; product-to-engineering loop tightened.
- **AI BDD Test Generator:** Auto-generates Gherkin test cases from a user story: zero manual writing, coverage up **60%+**.
- **RAG Pipeline + Multi-region log aggregation:** Containerized vector DB, indexed internal knowledge base, LLM grounded to indexed data only. Single log endpoint across distributed microservices; troubleshooting time down **90%**.
- **Hackathon 2025, #1 First Round:** Agentic tool that reads a product requirement from source and generates clean, commit-ready code in one click, cutting implementation time by **70%+**.

Arizona State University
Phoenix, AZ
Full Stack Engineer
Jan 2022 – Dec 2024

- Built React/Vue frontends and Java/Spring Boot backends serving thousands of daily users. Cut bounce rate **15%** on key UI flows and restructured legacy codebases into reusable components, achieving a **40% code reduction** and faster onboarding for new engineers.
- Optimized server-side Java APIs and AWS infrastructure (S3, Lambda) to handle peak academic load, reducing backend processing times, cutting infrastructure costs, and improving user flow efficiency by **20%**.

Apex Systems (Apple Maps)
Remote
Data Analyst
Jan 2020 – Jan 2022

- Helped push Apple Maps service accuracy up **20%** through cross-functional data-quality work with Engineering and Product teams; maintained **98% annotation consistency** across thousands of data points.

PROJECTS

Agentic Receptionist: Voice + Chat AI System
ringanswered.com · live in production
2025 – Present

- Deployed multi-tenant AI receptionist (voice + chat) running the full appointment lifecycle: books, reschedules, cancels on live calendars behind identity-verification guardrails. Supervisor agent scores every conversation (LLM-as-judge QA); human escalation for emergencies; owner/admin dashboards with transcripts; pricing engine. Stack: Python · FastAPI · GPT-4o · Vapi · React · Docker · AWS ECS

MCP Agent Lab: Workflow vs. Agent vs. Multi-Agent
2026

- Built an MCP tool server (FastMCP: typed tools, guiding error contracts, approval-gated writes) modeling five backend systems, plus three orchestrations over the same tools: fixed workflow, single-agent loop with runtime tool discovery, and supervisor multi-agent with least-privilege specialists, critic review before any write, and human-in-the-loop approval. The production autonomy dial end-to-end: step budgets, structured outputs, and full call tracing: the guardrail patterns regulated environments require.

AI Agency Platform
2025 – Present

- Productizing agentic AI for small businesses: voice agents, automated lead qualification, and CRM pipeline as a managed service; first vertical: dental and professional-services offices still running on phone-based workflows.
